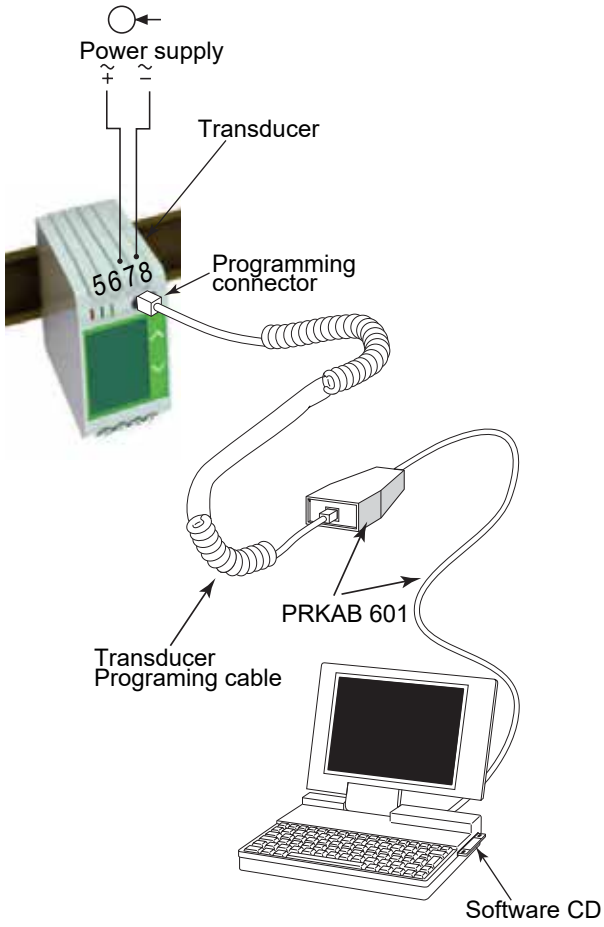
Programming

Programming of transducer can be done in three ways	1) Programming Via Front LCD & two keys. 2) Programming Via optional RS-485(MODBUS) communication port. (Device address, PT Ratio, CT Ratio, Password, communication parameter, Output Type & simulation mode can be programmed). 3) Programming Via Programming port available at front of Theta Hz Transducers using optional PRKAB601 Adapter.
Programming Via Programming port (COM)	A PC with RS 232C interface along with the programming cable PRKAB 601 and the configuration software are required to program the transducer.



The connections between	PC ⟷ PRKAB ⟷ Transducer, The power supply must be applied to Transducer befor it can be programmed. The Configuration software is supplied on a CD. The programming cable PRKAB 601 adjusts the signal level and provides the electrical insulation between the Transducers.
Configuring Rish Con Transducer	To Configure the Transducer Input / Output one of the tree programming methods can be adapted along with mechanical switch setting (DIP switch setting on PCB).
DIP Switch Setting for OUTPUT	Type of output (current or voltage signal) has to be set by DIP switch For programming of DIP switch the user needs to open the transducer housing & set the DIP switch located on PCB to the desired output type Voltage or Current. Output range changing is not possible with DIP switch setting Reder below for DIP switch setting. The four pole DIP switch is located on the PCB in the Theta Transducer

The four pole DIP switch is located on the PCB in the Transducer

DIP Switch Setting	Type of Output Signal
