

Up to date technology brings a new energy measuring instrument to the electrical industry

The C&C Energy Meter is based on semiconductor technology and is intended to replace the conventional electromechanical (Ferraris type) commonly used power meter.

Models are available for single phase, three phase three wire and three phase four wire systems. Inputs are from standard current transformers and normal mains voltages.

Output is in the form of unit energy (watt-hour) pulses read by the built in counter or outputted to an external counting system.

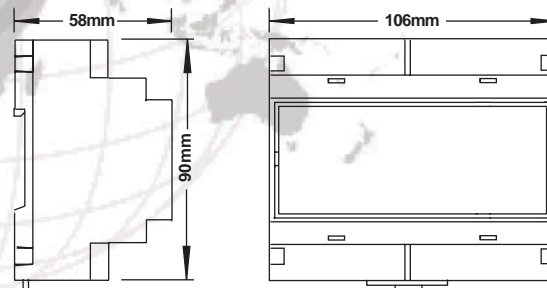

Basic Specifications

- Inputs** : 0-1A, 0-5A, standard current transformer
: 110V, 230V, 400V ac
- Outputs** : 1. Internal 7 digit accumulating counter
: 2. NPN open collector opto coupler (pulse or square wave)
: 3. N/O relay contacts (dry contact)
: 4. Output types 1 and 2 together
: 5. Output types 1 and 3 together
- Accuracy** : Class 1

Models Available

- LP-1KW1 Single Phase
LP-1KW3 Three Phase, Three Wire Balanced Load
LP-1KW4 Three Phase, Four Wire Balanced Load
LP-2KW3 Three Phase, Three Wire Unbalanced Load
LP-2.5KW4 Three Phase, Four Wire Unbalanced Load
